15

- 1. (Orignal) A crystalline polyester polyol obtainable by polycondensation of: a dicarboxylic acid component comprising
 - (1) 85 to 99 mol% of an aromatic dicarboxylic acid and
- (2) 15 to 1 mol% of an aliphatic dicarboxylic acid of HOOC-(CH_2)_n-COOH wherein n is 8 to 10, with
 - (3) an aliphatic diol component of HO-(CH₂)_m-OH wherein m is 11 to 20.
- 2. (Orignal) The crystalline polyester polyol according to claim 1, wherein the aliphatic dicarboxylic acid (2) is dodecanedioic acid and the aliphatic diol (3) is 1,12-dodecanediol.
 - 3. (Currently Amended) The crystalline polyester polyol according to claim 1, which has a melting point of 90°C to 120°C.
 - 4. (Currently Amended) The crystalline polyester polyol according to claim 1, wherein enthalpy at crystallization on differential scanning calorimetry (DSC) is 55 J/g or more.
 - 5. (Currently Amended) The crystalline polyester polyol according to claim 1, wherein number average molecular weight is 1,000 to 20,000.
 - 6. (Currently Amended) A urethane prepolymer obtainable by reacting the crystalline polyester polyol according to claim 1 with a polyisocyanate.
- 7. (Original) A hot-melt adhesive wherein the urethane prepolymer according to claim 20 6 is used.
